Plan:
Our team plans to work together by communicating over text and using GitHub for code collaboration. We will have meetings to check in on progress and discuss our vision for the game. We have distributed the work evenly among members between 4 main priorities: map layout and assets, player and menu, enemy ai and function, and task progression and in-game UI. We will work independently for the most part, but collaborate with each when working on features that overlap between different group members. We have a group chat to keep track of progress updates and set deadlines for features implemented for project milestones.

Team Member Tasks:
Brian Li (bhli2):

- Create museum layout
- Integrate textures and assets
- Add museum lighting
- Add ambient audio
- Add distinct audio when being chased
- Set up Github

Haotian Li (hl87):

- Create the first person character
- Create a player movement system (walking, crouching, etc.)
- Add main menu
- Add menu options to start/restart the game
- Add directional warning for the anomaly
- Add UI elements for how visible the player is and how much noise they are making
- Add victory screen

Oliver Scanio (oscanio2):

- Add anomaly AI
- Add the anomaly's ability to detect the player (proximity, light, noise)
- Add anomaly movement/route system
- Design the model and animation for the anomaly
- Add the anomaly texture
- Add game over screen when caught

Ziyue Lin (ziyue8):

- Create the flashlight
- Create the task system and progression
- Add task functionality (ability to inspect cases, clean glass, etc.)
- Add animations for the tasks
- Add museum entry scene
- Create the tablet UI
